

Multi-layered stainless steel floor "Blindo Floor"

® National patent n° RM2007A000231

Blindo Floor® is the only certified class 1 armoured flooring, created using interlocking stainless steel plates.

Blindo Floor is completely new thanks to the special coupling system between the plates, transforming the armoured floor into a single sheet of metal that cannot be lifted or broken through.

Once installed **Blindo Floor** transforms a normal floor into an "armoured safe" that cannot be attacked by thieves.

Blindo Floor does not require masonry work therefore it can be installed to protect shops, banks, post offices and data processing centres and can be located on upper floors or in sites subject to heritage listing restrictions.

Blindo Floor is simple to fit and can be assembled very quickly without interrupting work, and does not require the intervention of specialist staff.

Blindo Floor can be covered with linoleum, parquet, carpet or any other kind of flooring.

Our company exclusively provides a special magnetic, self-adhesive, highly-adhesive floor that does not require glue. **Blindo Floor** is a Class 1 product and therefore fully conforms to both the breaking and entering and fire requirements for armoured flooring, in accordance with regulation: UNI EN 1143-1:2006.
